125 ANNIVERSARY

2018

Pavia Systems Inc., founded in 2005 by George White and Si Katara, is a software technology company specializing in the transportation infrastructure industry. The company emerged from the founders' research efforts at the University of Washington's Civil Engineering Department after years of research efforts in conjunction with several state DOTs including Minnesota's. Pavia Systems was created as a direct response to industry needs identified by the company's founders during said research.

"Through a pooled fund study, the SPTC – State Pavement Technology Consortium- from TxDOT, WSDOT, MnDOT chose Pavia Systems to help them determine how to best apply technology to streamline processes, an initiative today known as e-Construction.

Today, the company is focused on helping clients increase project intelligence on transportation construction projects by increasing efficiency and quality of construction projects."
