125 ANNIVERSARY

2018

SEH

From its humble beginning as a one-man firm in North St. Paul launched by Percival Bannister in 1927, SEH grew into a nationally recognized Company of more than 800 engineers, architects, planners and scientists. In its early years, SEH worked primarily on survey and rural electrification projects with clients it still serves to this day. During World War II, the company was involved in millions of dollars worth of major defense projects, such as a \$13 million Army air base in Iowa. However, it was not until the late 1940s and early 1950s that SEH began its journey to becoming the company they are today, as they brought power and light to more than 60,000 farms across Minnesota, Wisconsin and North and South Dakota. The company's transportation roots stem from the Federal Highway Administration establishment of a nationwide bridge inventory to identify deficient bridges in the 1980s, when the company began working with cities, counties and transportation departments to help develop solutions for bridge deficiencies.

Today, SEH is a leading consulting engineer in the transportation industry. You can learn more about the history of this great Minnesota success story at: <http://sehinc.com/news/history>
