Honoring The Past, Embracing The Future

1893

125 ANNIVERSARY

2018

**Engineering
Architecture
Planning**

Founded in 1910 by German-born Structural Engineer Maximilian Toltz, TKDA has played a key role in designing Saint Paul's roads, bridges, rail, mass transit, parks and trails as well as buildings and facilities for companies, schools and government agencies for more than 100 years. TKDA played a major role in the design of Saint Paul's landmarks, such as the Como Park Conservatory (now Marjorie McNeely Conservatory) the iconic Hamm Building and the Robert and Washaba Street bridges.

Today, TKDA has established themselves as trusted experts who bring quality design and service in six distinct areas – architecture, aviation, building engineering, municipal engineering, rail and surface transportation, and as a leading consulting engineer for the transportation industry.
